

**m<sup>3</sup>cube**®  
ACMV MAINTENANCE SPECIALIST

A photograph showing two workers in full-body protective suits and hoods. One worker on the left is holding a fogging machine, and a mist is being emitted from it. The other worker on the right stands with their back to the camera. They are in a long, brightly lit hospital hallway with a tiled floor and a glass railing on the left. The overall image has a light blue tint.

**HOSPITAL GRADE FOGGING  
AND DISINFECTION SERVICES**

# Our Disinfectant has Been Proven to Kill:

- Staphylococcus aureus (MRSA or Golden Staph)
- Pseudomonas aeruginosa
- E coli
- Enterococcus Faecalis (VRE)
- Acinetobacter
- Acetobacter
- Salmonella choleraesuis
- Proteus vulgaris
- Influenza virus
- Herpes Simplex virus
- Hepatitis B Group virus

## Fogging and Disinfection Services

Our hospital-grade disinfectant is used for all of our fogging and disinfection services. This disinfectant has been used by healthcare, pharmaceutical and bio-science industry due to its rapid and wide spectrum killing effect against pathogenic microorganisms. This formulation is also widely used in hospitals, clinics, laboratories, factories, public transports where regular disinfection are mandatory.

It is a pH 7, and completely biodegradable, which means it is safe for human, animal and the environment.

## Room Air Disinfectant Fogging

The solutions will be transformed into fine mists by fogging machine forming Ultra Low Volume (ULV) electrostatically charged droplets, measuring 30–50 micron in Volume Mean Diameter (VMD). This means they are small enough to hang in the air long enough to tackle pathogens, and are also attracted to land underneath, on top of and on the sides of surfaces in the same way as pathogenic microbes. Our Cold Fogging machine are able to create a throw of 30-50 feet, which means that an area of up to 2500 square feet can be disinfected in 10 to 15 minutes.
